WORK EXPERIENCE

Associate Data Scientist at Wipro

Sep-2024 to March 2026

- **Network Security Threat Detection and MLOps Platform:** Designed and implemented an end-to-end machine learning pipeline for phishing website detection using Python, Scikit-learn, FastAPI, MongoDB, AWS, and MLflow. Automated data ingestion, validation, preprocessing, feature engineering, model training, and prediction workflows. Integrated experiment tracking and model versioning, enabling scalable deployment and production-ready threat detection.
- **Data Validation and Drift Monitoring Framework:** Developed an automated data quality monitoring system to perform schema validation, missing value analysis, and data drift detection across machine learning workflows. Improved pipeline reliability by proactively identifying data inconsistencies and reducing model deployment risks.
- **Real-Time Prediction and Deployment Services:** Built FastAPI-based REST APIs for real-time and batch prediction workflows. Containerized applications using Docker and implemented cloud-ready deployment architectures with logging, exception handling, and reusable pipeline components for scalable inference.
- **Customer Churn Prediction using Deep Learning:** Developed an Artificial Neural Network (ANN) using TensorFlow and Keras to predict customer churn from customer behavioral and demographic data. Performed feature engineering, data preprocessing, model optimization, and classification analysis to support customer retention and predictive decision-making.
- **Procurement Spend Analytics Dashboard:** Designed and developed an interactive analytics platform using Python, Streamlit, Pandas, and Plotly to analyze procurement spending patterns, supplier performance, operational KPIs, and cost optimization opportunities. Delivered actionable business insights through automated reporting and executive-level visualizations.
- **Business Intelligence and Cost Optimization Reporting:** Built analytical workflows to identify spending trends, procurement inefficiencies, supplier concentration risks, and optimization opportunities. Enabled data-driven decision-making through KPI monitoring, trend analysis, and interactive reporting solutions.
- **ML Experiment Tracking and Model Lifecycle Management:** Implemented MLflow-based experiment tracking and model management workflows to compare model performance, monitor experiments, and streamline the machine learning lifecycle from development to deployment.
- **Cloud-Native ML Deployment Pipeline:** Engineered deployment workflows using Docker, AWS, Azure, Git, and CI/CD concepts to host machine learning applications in production environments. Improved deployment efficiency, scalability, and maintainability through modular architecture and automated workflows.

TECHNICAL SKILLS

Programming Languages: Python, Sql

Frameworks Libraries: FastAPI, Flask, Streamlit, TensorFlow, Keras, PyTorch, Scikit-learn

Machine Learning Data: Pandas, NumPy, SciPy, Scikit-learn, TensorFlow, Keras, PyTorch, MLflow

DevOps Tools: Docker, Git, GitHub, MLflow, DagsHub, AWS, Azure, CI/CD Concepts

Advanced Modelling Techniques: Machine Learning, Deep Learning, Classification, Regression, Ensemble Learning, Feature Engineering, Hyperparameter Tuning, Predictive Analytics, Anomaly Detection, Time Series Analysis, Model Evaluation

EDUCATION

Sinhgad College of Engineering

Bachelor of Engineering in Electronics and Telecommunication - **CGPA - 8.11**

2020 – 2024

Pune

ACCOMPLISHMENTS

- * **Client and Wipro VP Appreciation Award** – Recognized for developing a cost automation solution that improved estimation accuracy and accelerated business decision-making.
